

The main reason **Ventilation** is necessary is that our bodies and our activities load the air in our homes with moisture, odour and carbon dioxide.

Ventilation Systems which are well-designed and properly installed will comfortably replace stale, moist air with fresh, tempered air.

An **Olf** is an international unit of odour. 1 Olf is the average amount of odour produced per day by one bathed, non-smoking person wearing clean clothes. Smokers produce 5-7 olfs/day.

AIR FLOW
